

Abstract

The invention relates to a process for the preparation of L-amino acids, in particular L-threonine, in which the following steps are carried out:

- 5 a) fermentation of the microorganisms of the Enterobacteriaceae family which produce the desired L-amino acid and in which the malt gene or nucleotide sequences or alleles which code for it are enhanced,
- b) concentration of the desired L-amino acid in the medium
10 or in the cells of the microorganisms, and
- c) isolation of the desired L-amino acid.
